

Enhance the connectivity of your buildings with Wifirst and WiredScore

Paris, May 25th, 2023 - Wifirst is now certified with WiredScore's Accredited Professionals Program and can accompany its clients in their certification process too.

What's the WiredScore Accreditation?

WiredScore assesses the connectivity of buildings. The objective of this accreditation is to take stock and identify the connectivity potential of existing buildings, and to ensure that connectivity is taken into account during the design phase of new buildings.

Buildings that have obtained WiredScore Certification allow owners to show their desire to meet the current needs of users and, with the constant emergence of new technologies, to prepare themselves as well as possible for the future.

How to get the WiredScore Certification?

Wifirst is now able to accompany you in the labeling of your buildings under development or already existing, from the initial audit until obtaining your WiredScore Certification.

- During the construction phase: we carry out the follow-up and verification of the site surveys and the technical sheets all the way to the final audit.
- In operating sites: , we intervene and check the possibilities of labeling, setting up achievable levels, then give advice with the view of improving the performance of your network infrastructures.

This certification is in line with our technological model that allows us to finely manage the life cycle of our equipment and offer our customers the best service, while seeking a balance between the performance and durability of the technologies deployed, the cost of infrastructure and ecological impact.

About Wifirst

Wifirst is the European leader in managed WiFi for professionals. The operator deploys and operates high-performance, secure and sustainable "as a service" connectivity solutions. Its know-how and technologies appeal to IT decision-makers from the largest companies and public organizations (AccorHotels, Havas, The French Ministry of the Army, Norauto, The Ascott, etc.). Wifirst is present in the United Kingdom, Spain, Italy and Germany and currently covers 29 countries. In 2023, Wifirst joined the Next40: a program from the Ministry of Economy which identifies the most promising companies of the french tech ecosystem. For more information: www.wifirst.co.uk
