

Wifirst obtains ISO 27001 certification for its information security management

Paris, 9th January 2023 – Wifirst obtains ISO 27001 certification for its information security management. This major certification, obtained following an independent audit, demonstrates its commitment to protecting its customers' data and effectively managing information security risks.

Wifirst is now ISO 27001 certified for all of its key services: installation, operation, infrastructure supervision, managed networks (WiFi, LAN, WAN, SDWAN), provision of internet access and services. This certification firstly recognises the constant investment of employees who have worked to build a solid ISMS (Information Security Management System) for our multiple fields of application and it also materializes Wifirst's ability to protect customer data.

Marc Taieb, CEO of Wifirst declares: *“Obtaining this certification confirms our commitment to more responsible digital technology. For more than 20 years, we have been striving to deploy high-performance, durable and secure networks. I am proud to see our commitment rewarded by this international reference standard which recognises the seriousness of our procedures guaranteeing the confidentiality, availability and integrity of our networks”*.

This certification represents a milestone in Wifirst's ongoing commitment to apply the most rigorous security procedures both within its organisation and to its customers and partners.

About Wifirst

Founded in 2002, Wifirst is the leader in managed WiFi for professionals. Wifirst has structured its activities around two main families of customers: the Hospitality & Residences market (Crous, AccorHotels, Club Med ...) and the Retail & Business market (La Poste, MAIF...). The Internet Service Provider extended its network internationally by opening offices in the United Kingdom and Spain in 2016 and to date covers 26 countries. A pioneer of the "WiFi as a Service" approach, Wifirst is committed to a continuous innovation process to offer a network capable of absorbing the spectacular increase in internet usage, offering high added value services and making WiFi the technical base of the digital transformation of its customers.
