

# CASE STUDY

## Elvetham

**« While the hotel has much history entwined within its foundations, we needed an up to date WiFi and data line by a service provider that was able to align with our aspirations of becoming the premium five-star hotel destination in Hampshire »**

Group Operations Director, Jastar Capital

IPTV, Chromecast, VOIP, Wireless Audio, Credit Card Machines, the back of house network, & Door lock system, all services sit onto Wifirst's network

### 01. CONTEXT

The Elvetham is one of the most historic sites in Hampshire entwined in the British Royal Family and can be traced back to as early as the 800's AD. England's tales are woven through its ancient oaks and parklands.

### 02. CHALLENGE

The Elvetham had previously invested in a wireless solution that over time had become outdated and, in turn, was no longer meeting the needs of today's guests. As a Grade 2 Star listed building, a great deal of careful advanced planning was needed to ensure that the new wireless service would provide excellent coverage while respecting the historically listed building necessities.

### 03. RESULTS

Phase 1 of installation at The Elvetham has provided excellent coverage of all guestrooms in the main house, public areas, meeting rooms and formal gardens. The final phase will see our coverage extend throughout the Stable Court building to provide guests with a seamless wireless connectivity experience throughout and a foundation on which other services are able to be provided. As the exclusive wireless network and fibre provider to The Elvetham, Wifirst has presented a fast, robust, secure, and future-proof, fully managed service that offers a great overall return on investment.
